國立臺灣海洋大學一００學年度研究所碩士班暨碩士在職專班入學考試試題

考試科目： 統計學

系所名稱： 運輸科學系碩士班運輸物流領域

※可使用計算器

1.答案以橫式由左至右書寫。2.請依題號順序作答。

********** 若無計算過程，一律以零分計 **********

(請四捨五入至小數點第 3 位；未特別說明者，皆以 5%的顯著水準計算)

1. (25%) A manufacturer has recorded its cost of electricity (Y) and the total number of hours of machine time (X) for the past 52 weeks. The following results are obtained by transforming the original data.

$\bar{x} = 10.865$; $\bar{y} = 104.195$; $\sum x_i^2 = 6{,}501.000$; $\sum y_i^2 = 598{,}732.169$;

$\sum x_i y_i = 61{,}464.311$; $\sum (x_i - \bar{x})(y_i - \bar{y}) = 2{,}594.288$;

$\sum (x_i - \bar{x})^2 = 362.058$; $\sum (y_i - \bar{y})^2 = 34{,}191.989$

(1). Complete the following tables.

(2). Estimate the fixed and variable electricity costs and explain the results.

(3). Determine and interpret the coefficient of correlation.

Coefficients

Predictor	Coefficients	Std. Error	t-ratio	p
(Constant)	_____	_____	2.537	0.014
Machine time	_____	_____	7.718	0.000

ANOVA (Analysis of Variance)

Predictor	Sum of Squares (SS)	d.f.	Mean Square (MS)	F-Statistic	p
Regression	_____	1	_____	_____	0.000
Residual	15,602.878	_____	_____		
Total	34,191.989	_____			

2. (20%) The 2010 Taipei International Flora Exposition is held in Taipei. According to the record, only 15% of the visitors have the chance to visit the pavilion of Dreams.

(1). Randomly select 10 visitors who have been to the Flora Expo, what is the probability that at least 2 of them have visited the pavilion of Dreams?

(2). Randomly select 100 visitors who have been to the Flora Expo, what is the probability that at least 20 of them have visited the pavilion of Dreams?

3. (15%) The following table describes the motorcycle helmet usage versus severity types for motorcyclists involved in traffic accidents in a city. At the 0.05 level of significance, can we infer that helmet usage affects the injury severity? Explain the meaning of the result.

Helmet Usage	Fatal	Injured	Not injured	Total
Yes	86	11,767	1,313	13,166
No	24	394	36	453
Total	110	12,160	1,349	13,619

4. (40%) Safety researchers, interested in analyzing the effect of vehicle model on travel speed, have observed the following speed (km/hr) measurements for three types of vehicles on Sun Yat-sen Freeway.

Vehicle Type	Observed Travel Speed (km/hr)					
Cars	121	102	97	112	106	95
Minivans	96	105	89	98	112	97
SUVs	113	109	96	108	125	98

(1). What are the null and alternative hypotheses for this test?

(2). Construct an ANOVA table and test the null hypothesis at the 0.05 level of significance.

(3). What are the required conditions (assumptions) for the test conducted in Part (2)?

(4). Do these data show a significant difference in the mean travel speed for these three types of vehicles? Explain the meaning of the results.

(5). Given that the speed limit on Sun Yat-sen Freeway is 100 (km/hr), do these data allow us to infer at the 5% significance level that the mean travel speed exceeds the speed limit? Explain the meaning of the results.

(6). Estimate the population proportion of speeding (exceeding the speed limit) vehicles with 95% confidence.
